DETAILED ACTION

Claim Objections

1. Claim 3 is objected to because of apparent typographical errors. If the steps of claim 3 were combined with the steps of claim 2, the resulting steps would not make sense, given the specification.

For the purpose of further examination on the merits, the Examiner assumes that claim 3 refers to "the step of retrieving" in claim 2, rather than "the method of claim 2."

Appropriate corrections are required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4, 7-11, 14-18, 21-22, and 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Agrawal et al (Agrawal hereafter).

With regard to claim 1, Agrawal shows a method comprising:

receiving a message at a computing device, wherein the message comprises a set of message headers and a message body, wherein the message body contains a

Art Unit: 2143

top-level fragment [See S52, Fig. 5 for the step of receiving a message at a computing device and Fig. 4, which shows message headers and message bodies]; and

retrieving a message header from the message, wherein the message header indicates that the message body includes a linking element to a next-level fragment [Because the message in Fig. 4 contains a header, the step of receiving the message would also receive the message header. Fig. 4 shows the <Tag Extension "caching properties> tags and enclosed material. The tags and enclosed material, for the purpose of the examination, are viewedd as linking element to a next level fragment].

With regard to claim 2, Agrawal shows the method further comprising:

retrieving the next-level fragment [See S53-S59, S61 and S62 in Fig. 5] and

combining the top-level fragment and the next-level fragment into an assembled fragment

[See S60 ("assembled page") in Fig. 5 and Fig. 4].

With regard to claim 3, Agrawal shows the fragment retrieving step comprising:

obtaining a source identifier for the next-level fragment from the linking element [the source identifier is read as the <Tag extension> in Fig. 4.];

sending a request message for the next-level fragment using the source identifier for the next-level fragment [See S55 in Fig. 5. Accessing and querying data sources as indicated in S55 perforce sends request messages]; and

receiving a response message comprising the next-level fragment [See S55. Accessing data sources perforce receives messages].

Application/Control Number: 10/034,748 Page 4

Art Unit: 2143

Claim 4 stipulates that the protocol header is generated by a server that originated the top-level fragment. Agrawal does not explicitly show the limitation. However, it suffices to note that in any client/server HTTP connection, including those of Agrawal, the transmitting server must write a protocol header into every message it sends.

With regard to claim 7, Agrawal shows that the message is an HTTP (Hypertext Transport Protocol) Response message. See paragraph 0027, which speaks about using HTTP.

Claims 8-11, 14-18, 21-22, and 25 substantively incorporate all the limitations of claims 1-4, and 7, but in apparatus, computer program product, or product form. The reasons for the rejections of claims 1-4, and 7 apply to claims 8-11, 14-18, 21-22, and 25. Therefore, claims 8-11, 14-18, 21-22, and 25 are rejected for substantively the same reasons.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 5, 12, 19, and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Agrawal in view of Patterson et al (Patterson hereinafter).

With regard to claim 5, Agrawal does not shows that the linking element comprises a source identifier, wherein the source identifier is formatted as a URI (Uniform Resource Identifier). However, note that Fig. 3 and Fig. 4 of Agrawal, illustrate HTML "Body." Patterson shows in Fig. 1.1 an example of Body that contains a URI.

The motivation for including within "Body" (as illustrated in Fig. 4 of Agrawal) an URI link is that HTML language was designed to support linking to other documents, including images, as apparently evidenced by the inclusion of various tags in the language. See pages 7-8 of Patterson for the description of hypertext (i.e., links to other documents).

Claims 12, 19, and 23 substantively incorporate all the limitations of claim 5, but in apparatus, computer program product, or product form. The reasons for the rejection of claim 5 apply to claims 12, 19 and 23. Therefore, claims 12, 19, and 23 are rejected for substantially the same reasons.

6. Claims 6, 13, 20, and 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Agrawal.

With regard to claim 6, Agrawal does not show the method of claim 1 wherein the linking element is defined using SGML (Standard Generalized Markup Language).

The motivation for using SGML to define the HTML extension (the linking element) is suggested by the original HTML design: HTML itself was defined using SGML.

Claims 13, 20 and 24 substantively incorporate all the limitations of claim 6, but in apparatus, computer program product, or product form. The reasons for the rejection of claim 6 apply to claims 13, 20, and 24. Therefore, claims 13, 20, and 24 are rejected for substantially the same reasons.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ji-Yong D. Chung whose telephone number is (571) 272-7988. The examiner can normally be reached on Monday-Friday 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wiley can be reached on (571) 272-3923. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
